Hi John,

I'm making a table that lists the studies that were eligible to have a POD developed for. These were the high and medium confidence studies for which dose-response results were reported. **Ex. 5 Deliberative Process (DP)**
Ex. 5 Deliberative Process (DP) There are other studies that looked to me as though they also could have been eligible but no cRfC was derived. Could you look at this table and provide a rationale for why these studies were not used?

Thanks for your help! Barbara
